Academic Project

- **Clinic Management System**

Platform: React, Sprig Boot, MySQL

This system manages complete online clinic details in a single application and in a single database. The users will use this system to handle all the functionalities easily. Doctors will also use the system to keep track of the patients consulting to them. The intentions of the system are to reduce overtime pay and increase the number of patients that can be treated accurately. Requirements statements in this document are both functional and non-functional.

- **IOT Based Health Monitoring System**

Platform: Embedded System Design

Developed an IoT Based Patient Health Monitoring System using Arduino microcontroller & Bolt WiFi module. This system continuously read the pulses and measure the body temperature using a heartbeat and temperature sensor and monitor them on an LCD display. The system sends the alert SMS and email to relatives or doctors when the panic condition is detected with the location.
